

4PL_plate_fit_v3 m0

BICc = 64023.06 AIC = 62033.42

	random effect	mab_virus effect	run_id effect	goes_down effect
U	No	No	Yes	No
L	No	No	Yes	
L_gap	Yes	Yes		Yes
h	Yes	Yes		Yes
f	Yes	Yes		Yes
alpha	No		Yes	
k	No		Yes	

Note: this model's structural equation (see model.txt) uses L_gap as an offset on the upper amplitude: $\text{numerator} = U - (L + \exp(L_gap))$, not a floor offset on L directly -- do not reuse the pure_rlu family's L_gap formula for this project, it means something different here.

Binary design matrix ordered by BICc
