

# 4PL\_pure\_rlu m59

BICc = 28578.99    AIC = 28095.87

|       | random effect | mab_virus effect | run_id effect | goes_down effect |
|-------|---------------|------------------|---------------|------------------|
| L     | Yes           | Yes              |               | Yes              |
| m     | Yes           | No               |               | Yes              |
| e     | Yes           | No               |               | Yes              |
| alpha | No            |                  | Yes           |                  |
| k     | No            |                  | Yes           |                  |

*Note: U is not an estimated parameter in this model -- it is derived deterministically as  $U = \text{mean\_vc} * (1 - \text{edge})$ , so it has no toggle row here.*

Binary design matrix ordered by BICc
